THEJAS BALENAHALLI KIRAN

Boulder, CO-80302 • thejas.kiran@colorado.edu • 720-208-8326 • linkedin.com/in/thejasbk

PROFESSIONAL EXPERIENCE

Data Science Intern, Walmart, Inc., Texas, USA June 2022–Aug 2022

- Worked with multiple tables and created a data engineering pipeline on Spark for modelling
- Implemented a Deep Learning algorithm (DeepAR) using GluonTS for predicting item sales for all stores
- Optimized the cloud computing cost by decreasing number of models in the forecasting engine by 94% and reducing runtime by 86%

Research Assistant, University of Colorado, Boulder, USA Dec 2021 - Present

- Currently building an active learning algorithm to deploy on a survey page to understand user likings
- Building a model to capture heterogeneity among multiple distinct tastes for consumers to allow individual consumers to express multi taste preferences
- Developed a survey portal using Django web framework
- Worked on building image mining algorithms for visual elicitation of consumer preference

Python Developer Intern, Sayvy Global Tech, India May 2021-Aug 2021

- Implemented a Deep Learning algorithm to transcribe and translate languages from videos and designed a subscription based website on Django to provide access to customers
- Fine-tuned a Deep Learning model to detect user's mood from their facial expression and suggest coffee beverages accordingly

Software Engineering Intern, Uton Energia, India Sept 2020-Jan 2021

- Trained an OpenCV model to detect faulty bike parts from images with an accuracy of 80%
- Built a mobile application to keep track of various bike sensor information in real-time

EDUCATION

M.S. in Data Science, University of Colorado Boulder, USA (**CGPA:** 3.987/4) *2021-Present*

- **Coursework:** Statistical Methods and Applications, Data Mining, Machine Learning, Deep Learning and Neural Networks, Data Center Scale Computing

B.E. in Computer Science and Engineering, VTU, India (**CGPA**: 8.38/10) *2016-2020*

- **Coursework**: Machine Learning, Deep Learning, Big Data Analytics, Data Structures and Applications, Discrete Mathematical Structures, Database Management Systems, Cloud Computing, Python Application Programming

PROJECTS

No Brains Machine Learning Oct 2022-Present

- Building a basic Auto ML platform that generates the best model with optimized parameters for any dataset

Forecasting eBay delivery time, eBay ML challenge Sep 2021-Nov 2021

- Forecasting delivery times of products on eBay by building machine learning models - XGBoost, Random Forest Regressor, and SVM

Air Gesture Interface for Wheelchair Navigation and Home Access Oct 2019-Jul 2020

- Used MATLAB and Arduino boards to build a wheelchair control and home automation system by analyzing hand signals for differently-abled

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy, scikit-learn), R, SQL**,** Dart, JavaScript
Softwares: Azure Databricks, GCP, Tableau, Git
Frameworks: Apache Spark, Kubernetes, TensorFlow, PyTorch, GluonTS, Django, Angular, Flutter

PUBLICATIONS

- Analysis, Visualization, and Prediction of COVID-19 Pandemic Spread Using Machine Learning **(Springer)**
- Wheelchair Control and Home Automation using hand gestures **(European Alliance for Innovation)**
- Home Automation and Wheelchair Control using Air Gesture: A Survey **(PiCES)**
